PROFILE

A dedicated and detail-oriented professional with over 2 years of experience at Cognizant, specializing in process management, client communication, and operational support. I have developed strong analytical, problem-solving, and organizational skills through consistent delivery in fast-paced, client-focused environments. I recently completed my Master of Computer Applications (MCA) in September 2025 and earned the Microsoft Certified: Azure Administrator Associate (AZ-104) certification, which strengthened my technical foundation in cloud computing, system administration, and IT operations.

I am now seeking to transition into an IT infrastructure role such as Azure Administrator or DevOps Engineer, where I can apply my technical knowledge, adaptability, and process-oriented mindset to manage and optimize cloud environments. My goal is to contribute to building scalable, secure, and efficient systems while continuing to grow my expertise in Azure services, automation tools, and cloud-based solutions. With a strong commitment to learning and professional development, I aim to bridge my operational experience with technical skills to support organizational growth and innovation in the IT domain.
